Established in the year 2014, we, “Anubhuti Power System” are involved in manufacturing and supplying a remarkable range of electric motors, industrial gearboxes, coolant pumps, and worm gear reducers. The entire range of products is developed in compliance with the international quality standards using advanced machinery & technology and optimum quality raw materials which are sourced from certified vendors of the market. Owing to the characteristics like excellent performance, sturdy construction, easy & safe usage, durability, seamless finish, and longer service life, our offered products are extensively demanded all over the nation.

Based in Ahmadabad (Gujarat), we have an advanced infrastructure that is installed with all ultra-modern machinery, equipment, and tools that help us produce quality products. The infrastructure is segmented into various units to handle all the business operations in an organized way. We have employed a team of professionals who have immense knowledge about technical aspects and regularly upgrade the machinery to enhance the production rate.

We also have a spacious warehouse where we store our products before their final delivery. This unit is handled by a team of quality testing experts who not only inspect the manufacturing processes but also verify the whole procedure right from the sourcing of raw materials to the final dispatch to the user's end.

Under the leadership of our mentor Mr. Rakesh, we have been able to make our products popular across India. His management skills, thorough industry knowledge, and business intelligence have helped us in obtaining new heights in this industry.
