What would we do without salt?

SALT

In common usage, salt is a mineral composed primarily of Sodium Chloride (NaCl). Salt is one of the oldest and most ubiquitous food seasonings, and is known to uniformly improve the taste perception of food, including otherwise unpalatable food.

Some of the earliest evidence of salt processing dates to around 6000 BC, when people living in the area of present-day Romania boiled Spring water to extract salts; a salt works in china dates to approximately the same period. Salt was also prized by the ancient Hebrews, Greeks, Romans, Byzantines, Hitties, Egyptians, and Indians. Salt became an important article of trade and was transported by boat across the Mediterranean sea, along specially built salt roads, and across the Sahara on camel caravn. The scarcity and universal need for salt have led nations to go to war over it and use it to raise tax revenues. Salt is used in religious ceremonies and has other cultural and traditional significance.

SALT IN INDIA

Though salt was considered as “God’s gift” in ancient times and used for diplomatic purposes, in modern days it has more than 14,000 uses. India occupies the third place in the production of salt by producing 8.9 per cent of the total world production being cultivated in 1.45 lakh hectares. Gujarat, Rajasthan and Tamilnadu are the top-3 states in which the yield and labour productivity were found high among the salt producing states in India. In 2013-14, 59.61 lakh MT of salt was exported which accounts for Rs.844.4 crore.

In India, the historical records speak about the dominance of salt as a medium of exchange and much before the invasion of Alexander, the Great, around 327 BC, salt was extracted from the salt mines of the Northern India and transported to different parts of the country.

Though it was a luxury commodity for the poor people in India, Mahatma Gandhi (12-03-1930) broke the salt policy of the British Government by a protest declaring that “with this, I am weakening the foundation of British empire”. After independence, ‘salt’ became a central subject, headed by the Salt Commissioner of India. As the time advanced, uses of salt increased and the method of producing salt has also undergone significant changes. In modern times salt has about 14000 known uses from food to industry to de-icing.

Presently about 110 countries are actively engaged in the production of salt and India occupies a place of pride at third place .

India however produces one of the cheapest salts as it exports to the major top two producers like wise China (By Sea) at around 2013-2014 with 27.44 MT

Origins -

GUJRAT - The largest Salt producer state in india with latest tech and easy deployment through various ports like Kandla and Mundra (for Sea)

Certificates -

Our company is export complainace as per Indian rules and regulation.

Port of loading -

Majorly Port used for exports are Kandla and Mundra of Gujrat

Packaging Sizes Skuz-

1. For Free flow Iodized salts in our brands:-
 - 1 kg Packets @25 kg bags Packaging
 - ½ kg Packets @25 kg bags packaging
 - 1 kg Packets @50 kg bags packaging
 - ½ kg Packets @50 kg bags packaging
 2. Any white labeling can be done in your brands or any readily available brands.
 3. Any Industrial , edible , or any other uses of Salt in any form of packaging as
per the customer requirements can be met.
