About Us

Veena Plastics, incepted in the year 2022, is a leading manufacturer and supplier of plastic scrap in India. We mainly deal in HDPE grinding scrap, LDPE grinding scrap, PP grinding scrap, and PPCP grinding scrap. All of our products can be used for manufacturing decorative products, flooring products, wall covering products, waterproofing products, electric wiring, and carry bags, buckets, packing covers, mugs, much more. The product range offered at Veena Plastics is unmatched in terms of quality as well as cost.

Based in Perambalur (Tamil Nadu), we not only aim to establish a strong foothold in Tamil Nadu but also mark a significant presence in major markets of India. We implement the latest production technologies and use supreme quality inputs obtained from reliable sources to produce our product range. The collected plastic waste/scraps are first segregated in our facility according to their quality and grade then carefully cleaned, washed, and dried up. The cleaned waste is then fed into an extruder where it gets melted and converted into strands. The strands then are fed into a cutter and ground into granules. We give the assurance that our scrap range is at par with the required quality standards and norms.

Maintaining quality standards is the top priority at Veena Plastics and thus, we follow a strict quality management policy throughout the entire business process. Moreover, we ensure quick deliveries of orders and pay attention to avoid any sort of problem during transit.

Our highly skilled professionals are aware of the real needs of our customers and ensure that they are served in an appropriate manner. Further, we ensure the proper training of our staff so that they can match with the ever-changing business trends and environment.
