# About Us

Founded in the year 2009, Garima Minerals is functioning under the management of Mr. Gaurav Dhariwal (proprietor). Under his expert direction, the company has grown into a reliable Minerals Manufacturer and Supplier in Pali, Rajasthan. Today, we aspire to continue being the foremost Manufacturer of Soapstone Powder and other minerals through quality-driven approach, stringent supervision and timely delivery.

## Infrastructure :

We have two factories. The manufacturing unit is spread over 5000 square feet and is equipped with 2 latest machines. By using the facility, we produce 20 tons of Minerals every day. Besides, we also have advanced testing facilities.

## Team :

There are approximately 200 employees working at Garima Minerals. They include chemical experts, quality controllers, supervisors, administrators, skilled laborers and others. All our employees have vast experience in their respective fields.

## Client Satisfaction :

All our business policies directly or indirectly are formed to achieve maximum client satisfaction. We have strict quality control policy to ensure that all the Minerals are formulated in compliance with the preset norms of industry. Likewise, we have fair pricing policy and also provide customers with the required packaging solutions.

### Features :

Pure

Finely meshed

Widely used in glasses

## OUR PRODUCTS

# Bentonite Powder

Garima Minerals is considered one of the leading Suppliers of Bentonite Powder. The Bentonite Powder is naturally occurring clays of great commercial importance possessing inherent bleaching properties. Also known as bleaching clays, our Bentonite Powder is highly demanded by our clients.

Types :

Two types of Bentonite Powder are generally identified. One is called the swelling type or sodium bentonite, which has single water layer particles containing "Na" as the exchangeable ion. The other has double water layer particles with Ca as the exchangeable ion. It is called calcium bentonite or non-swelling type.

"Na" or "Ca" is exchanged by "Mg" or "Fe". A third type of montmorillonite has been identified with zero water layer particles and is probably electro statically neutral. Calcium bentonite is usually referred to as fuller's earth by a number of authorities because chemically and also in physical properties it is identical to calcium-montmorillonite.
