Pressure garment

By Dr.Dillip Kumar Sahoo
MPH, BPO

Pressure garment are use for

-Pressure garments are worn after a burn **to control scarring, to help the scar mature, and to improve the look of your injured skin.** This is done by putting direct pressure on the skin; thus, the garments need to fit tightly in order to work well. Burn scars mature in 9 months to 3 years. You will need to wear these garments for at least 6 months and perhaps as long as 2 – 3 years. Your doctor will decide when you can stop wearing the garments.

-This is achieved by applying 20-25 millimeters of mercury (mmHg) pressure to the maturing scar 20+ hours a day.

-Use of pressure garment are

- 1) For verrucous Vein
- 2) For shape the body after liposuction
- 3) For shaping the chest after Gynecomastia

Gynecomastia best

Price Rs8900

- Compression garments are important for keeping the swelling down, reducing the bruising, and minimizing discomfort. The elastic of the garment helps the thinned skin adhering to the muscles that the healing process can be facilitated.
- Additionally, compression garments prevents unnecessary fluid build up and assists in achieving a smoother contour of the area.

Anti Embolism stocking

Price Rs 5800

We are the distributors of Anti Embolism Stockings in Chennai, India. Anti embolism stockings are used to prevent the DVT. Deep Vein Thrombosis (DVT) is a blood clot that develops in a vein deep in the body. The clot may partially or completely block blood flow through the vein. Most DVTs occur in the lower leg, thigh or pelvis, although they also can occur in other parts of the body including the arm, brain, intestines, liver or kidney. DVT itself is not life-threatening. But, the danger of DVT is that the blood clot has the potential to break free and travel through the bloodstream, where it can become lodged in the blood vessels of the lung. This is a condition known as a pulmonary embolism. This can be life threatening, so prompt diagnosis and treatment is critical

- You are at risk for DVT if you:
- Have had recent surgery (generally within 3 months)
- Have been on prolonged bed rest or hospitalization
- Have heart failure
- Have a blood clotting disorder

Varicose Vein stocking

Price Rs 5800 per piece with ZIP and 2 Hook adjustment

-Varicose veins are caused by **increased blood pressure in the veins**. Varicose veins happen in the veins near the **surface of the skin** (superficial). The blood moves towards the heart by one-way valves in the veins. When the valves become weakened or damaged, blood can collect in the veins.

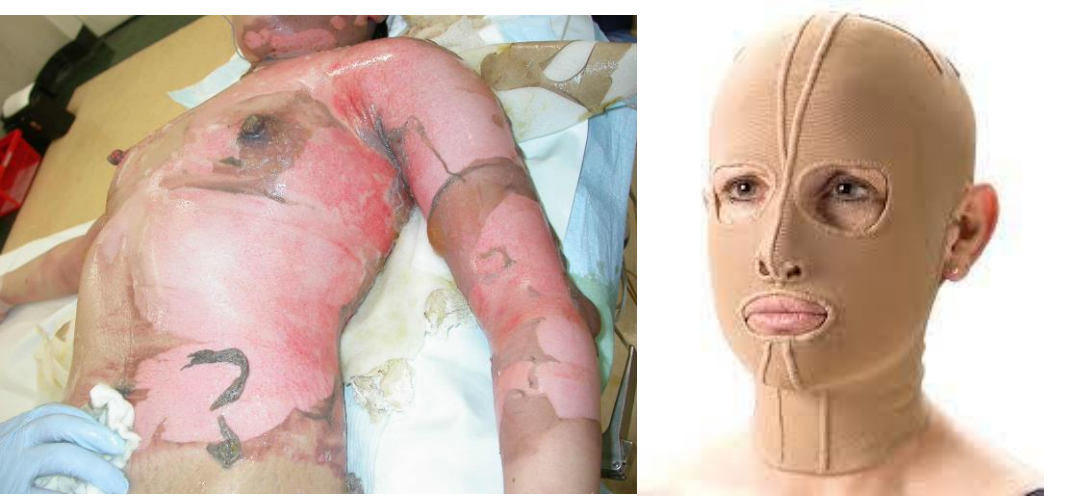

- Varicose veins may be more common in some families (inherited). Increased pressure in the veins may cause varicose veins. Factors that may increase pressure include:
 1. Overweight or obesity
 2. Older age
 3. Being female
 4. Being inactive
 5. Leg injury
 6. Pregnancy
 7. Smoking
 8. Taking oral contraceptive pills or hormone replacement
