NICE & NEW ABRASIVES INDUSTRIES

The company entered in shot blasting field in 1993, was doing outsource work for other companies for shot blasting of various items. With a broad vision in the blasting industry later in 2004, Shot Blasting Machine Spares Manufacturing was started. In 2010, Steel Abrasives Manufacturing facility was planned to provide excellent media for shot blasting for the growing industry. In 2018, exploring the market capabilities we introduced Casted Stainless Steel Shots for non-ferrous castings.

The company entered in shot blasting field in 1993, was doing outsource work for other companies for shot blasting of various items. With a broad vision in the blasting industry later in 2004, Shot Blasting Machine Spares Manufacturing was started. In 2010, Steel Abrasives Manufacturing facility was planned to provide excellent media for shot blasting for the growing industry. In 2018, exploring the market capabilities we introduced Casted Stainless Steel Shots for non-ferrous castings. Now we possess one of the best manufacturing infrastructure completely automated with latest technology for production of 12000 MT per annum.

We are serving the surface preparation and blasting industry with more than two decades. With the introduction of METASHOT we have done technical up gradation of our manufacturing capabilities. In the context of our country new initiative - "MAKE IN INDIA", we initiated to launch the METASHOT- a premium abrasives with automated and fully controlled production line.

We feel proud that we are one of the largest manufacturers of Abrasives in India with best quality steel shot and steel grits.

- Survival by credibility
- Development by quality
- Growth by relationship

Steel Shot

Country of Steel Shot refers to spherical grain made of molten steel through an atomization (granulation) process, available in different sizes and hardness. Metal working industries are main users of steel shot such as ferrous and non ferrous foundries, steel mills, forging industries and sand removal to improve the metal surface preparation. With our quality we serve various industries like Automotive, Metallurgy, Aerospace and Petroleum Industries.

Steel Grit

Steel Grit is a general-purpose manufactured abrasive used to remove thick coatings, heavy rust, and mill scale. It's fully angular shape cleans by aggressively cutting away at the surface leaving a uniform surface profile. Steel Grit is most commonly used in abrasive blasting rooms and mobile steel grit recycling systems and is frequently used for bridge, wind tower, and ship and railcar manufacturing and maintenance.
