Ultrasonic rat repellent device Work Principle

This machine turned on and as soon as it emits a powerful frequency emission of 20 to 65 kHz. Hearing this frequency, the rat starts to run like this. Frequency's voice is very painful in the ears of rats he cannot bear this. Because of this the rats cannot survive in one place and thus start running and if this machine is kept running continuously for 20 to 25 days, then the rats will run away from that place.

Ultrasonic rat repellent device using effects?

Install the device first then switch on. Set the frequency and volume of the machine after installation. After turning on the machine, the effect will go away immediately and you will see the rats running away for four to five days. The second week will see a slightly faster effect and the mice will also see less. In the third week you will not see the rat or its damage and the rat will run away from the house forever by the sound of this machine.

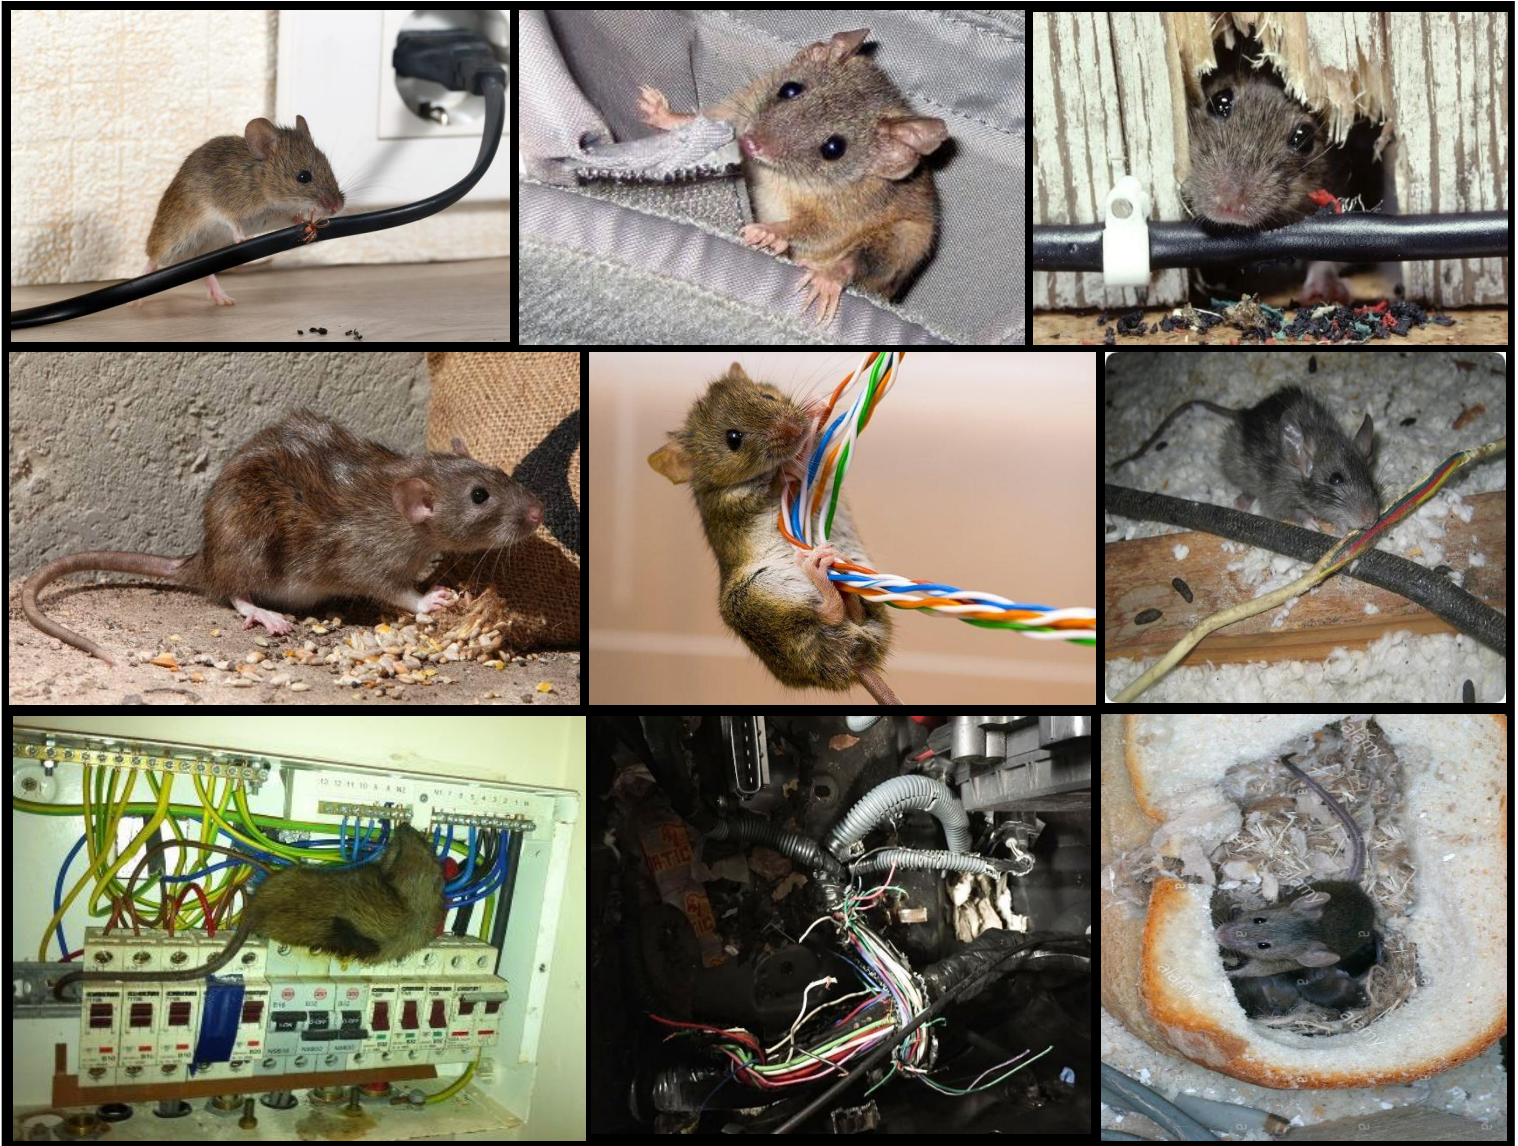

Russell's Viper Snake Sound Frequency

Advantages of Ultrasonic Rat & Rodent Repellent

- This machine is effective against rats, mice and squirrels.
