# | BALL VALVES | <br> METAL SEATED <br> ½" - 24" | Class 150 - Class 1500 <br> DN 15 - DN 300 I PN 16 - PN 40 

JC offers also a large range of metal seated ball valves for diferent services (slurries, pulp and liquors, high temperature, abrasive or sticking fluids, control).

1) Bubble tight sealing up to $327^{\circ} \mathrm{C}$ and Class V up to $500^{\circ} \mathrm{C}$
2) Low coefficient of friction
) Excellent sliding and running properties
) Hardens the complete surface of ball and seats

## WHY METAL SEATED BALL VALVES?

## METAL SEATED BALL VALVES ARE MAINLY USED FOR HEAVY DUTY APPLICATIONS SUCH AS:

)) High temperatures: above $260{ }^{\circ} \mathrm{C}$ the use of soft seats is not recommended.
)) Abrassive media: even small particles can damage soft seats.
) High Velocity in opening/closing cycles: this action can perfectly deform the soft ring and destroy the seat.

## HARDERING TREATMENTS

## HT-65

Max. Temperature: $500^{\circ} \mathrm{C}$
Corrosion Resistance: Medium
Abrasion Resistance: Medium
This is an exclusive treatment developed by JC with two main advantages, first all the ball and seat surface is hardened and second there is no additional overlay on the seat surface. This gives a very good thightness and a lower torque. The surface is hardened to 70 Rockwell $C$ and it is valid to work upto $500^{\circ} \mathrm{C}$.

## CT-70

Max. Temperature: $550^{\circ} \mathrm{C}$
Corrosion Resistance: Medium
Abrasion Resistance: High
Is a Tungsten Carbide coating in a metallic matrix bonded. Mechanically to the base material by HVOF methods. This treatment gives a very good resistance to abrassion and impact and is suitable to work upon $550^{\circ} \mathrm{C}$.

## CC-60

Max. Temperature: $800^{\circ} \mathrm{C}$
Corrosion Resistance: High
Abrasion Resistance: High
Is a Chromium Carbide coating in a nickel-chrome base in a metallic matrix bonded mechanically to the base material by HVOF methods. This treatment gives a very good resistance to abrassion and is the best choice for severe corrosion applications. It is suitable to work up to $800^{\circ} \mathrm{C}$.

## DIFFERENT SEAT DESIGNS

Metallic Seat
with O'ring

(5) Seat
(32) Helicol spring
(33) (37) O'rings
(13) (54) Graphite gasket
(52) O'ring

(5) Seat
(13) Spiralwound
(31) Seat carrier
(32) Helicol spring
(54) Graphite gasket

Metallic Seat
for Floating Valves

(5) Seat
(29) Washer
(33) O'ring
(32) Belleville spring
(54) Graphite gasket

## RANGE OF METAL SEATED BALL VALVES

JC can produce the following metal seated ball valves:

| Pressure Class | Floating | Monoblock | Trunnion |
| :---: | :---: | :---: | :---: |
| 150 | 1/2" upto 8" | - | 2" upto 24" |
| 300 | 1/2" upto 4" | - | 2" upto 24" |
| 600 | 1/2" upto 2" | - | 2 " upto 24" |
| 800 | - | 1/2" upto 2" | - |
| 900 | - | - | $2^{\prime \prime}$ upto 12 " |
| 1500 | - | 1/2" upto 2" | 2 " upto 8" |

## PRODUCTION OF METAL SEATED BALL VALVES

Metal seated vall valves are mainly used for heavy duty applications.

One of the main avantages of using JC metal seated ball valves is the fact that we can transform a soft seated stock valves into a metal seated valve.

## THE STEPS TO BE DONE ARE:

## )) Re-machining of the body.

) Lapping of the ball and seats.
)) Hardening treatment to ball and seats.
>) Final adjustment of the ball with its seats.
) Assembly and test.

Pressure - Temperature

DETAIL B

(*) Dimensions of diameters of drills ISO 5211 refer to table from page 60.
