

"LINK LOCK" - SPC Flooring, what does it stands for?

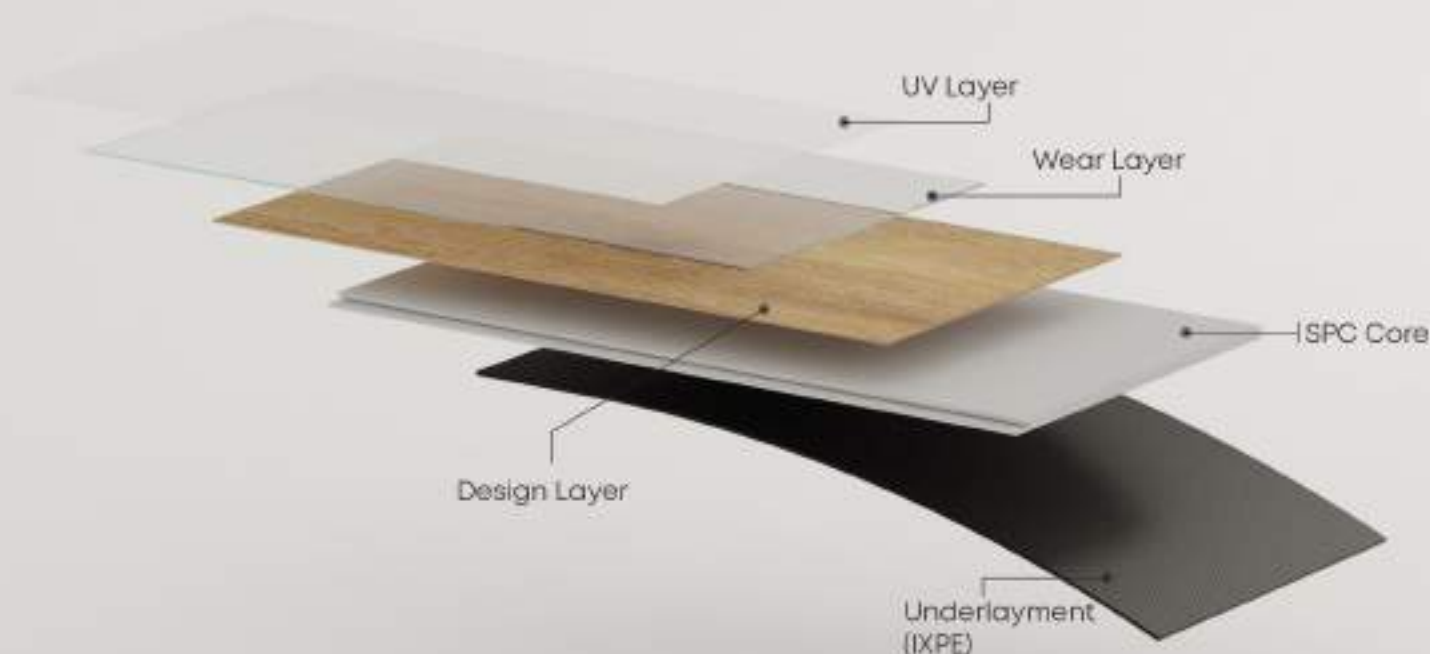

SPC flooring stands for Stone Plastic Composite. It describes the ultra-tough core of luxury SPC flooring. Popular for being 100% waterproof with extreme durability, these engineered luxury SPC planks with a cutting edge design, mimic natural wood and stone textures at minimal effort. LINK LOCK- SPC's base is virtually imperishable, making it an absolute choice for high-traffic and commercial environments.

EASE CLEAN

Appreciate the cleanliness

In Link n Lock tiles, material offers an innovative solution with a cutting edge design giving most demanding settings with high resistance to stains, abrasion and UV rays. That gives both functionality and durability.

SPC FLOORING

What Is The Role Of Spc In Flooring Actually ?

Link n Lock SPC flooring, is the most durable waterproof flooring in the market. SPC flooring is crowd-pleasing for being flexible and less bulky than traditional wood, well its just like standing on real solid material. It is thinnest flooring, may seem like it doesn't inside to it, but it is the toughest of the tough, specially designed to resist the use of commercial outskirts.

Enhance The Look, Feel The Groove

The term **"bevel edge"** refers to the v-shaped groove that the sides and ends of each plank are cut and how they appear once the panels are engaged together. The bevel edge serves to highlight the flooring's design and decor intentions. It is worth noting that all kinds of flooring, including spc, come with some form of beveled edge.

Bevels can really change the look and feel of flooring products. Throughout the years, the bevel has evolved in different stages together with the market trends and technical possibilities. The choice of the bevel type can give floors a more natural look, close to real wood products, and can elevate a floor to the next level of authenticity.

ARGIL's LINK N LOCK SPC flooring products have 2 different types of beveled edges.

- **Micro Bevel:** A micro bevel is a very small bevel which creates a distinction between each plank.
- **Painted Bevel:** A painted bevel has a thin strip of paint applied to the beveled edges of the plank, creating a subtle shadow line and a more realistic look.

Technology Partner

Unilin Uniclic stands out for its patented design, offering superior joint strength, flexible installation methods, and brand recognition—making it a trusted choice for premium vinyl flooring.

Many buyers focus on thickness or wear layer, but forget that a poor locking system can cause gapping, shifting, and costly complaints. That's why we always recommend looking deeper—starting with the click.

What Is The Unilin Locking System?

Most vinyl floors look similar—but how the planks lock together is a key technical difference.

Unilin Uniclic is a patented mechanical locking system developed by Unilin in Belgium. It allows vinyl planks to be joined by angling or tapping, without glue or nails. Uniclic is considered one of the most reliable vinyl click systems on the market for joint integrity, ease of installation, and long-term performance.

Why it matters?

Uniclic isn't just a design—it's a technology protected by global patents. It uses tongue and-groove joints with micro-angle engineering that delivers consistent interlocking strength. For large-scale buyers, this flexibility helps reduce labor costs and lower error rates. In my factory tests, the average install time using Uniclic is 18–22% faster than traditional glue-down or cheaper click systems.

Feature	Unilin Click (Uniclic)	Generic Click System
Locking Method	Angle-Angle / Angle-Tap	Angle Only
Patent Protection	Yes	Usually None
Joint Strength (N/m)	450–500	300–350
Avg. Install Speed (sqm/day)	80–120	60–90
Reusability	High	Low
