SCALE HUNTER

IMPULSE ELECTRO TURBULENCE AND ELECTROLYSIS

HARD WATER TO SOFT WATER WITH OUT CHEMICALS

WE SAVE **WATER.**
WE SAVE **EARTH.**
WE SAVE **ENVIRONMENT.**

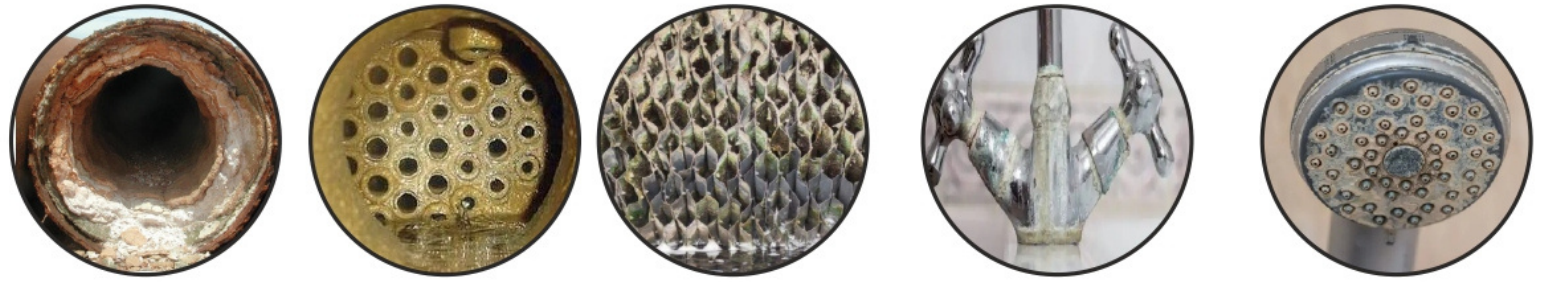

Domestic
Industries
Agriculture

ABSOLUTELY NO MAINTENANCE
MAGNETISM NO CHEMICALS
FREE NO SALT

What is Hardness in Water?

Scaling, which is the deposition of mineral solids on the interior surfaces of water lines and containers, most often occurs when water containing the carbonates or bicarbonates of calcium and magnesium is heated.

Because of temperature the formation of scaling

Adhesiveness properties the formation of scaling to increase the the temperature in every recirculation and friction of the pump. The precipitation of a crystalline substance from a solution onto the site of scale formation requires three simultaneous factors: super saturation, nucleation, and adequate contact time.

OUR VISION

Our vision is to improve the quality of water for everyone in the most convenient and affordable way possible. SCALE HUNTER is promoted by a team with extensive and relevant experience in the field of electronics, water analysis, and agriculture, we offer a practical, no-nonsense solution to the stubborn problem of Hardness in Water whether it is for domestic, commercial, industrial, or agricultural use. At SCALE HUNTER, all our products are backed by rigorous research and field validation resulting in products and services that are cost-effective, technologically advanced, and maintenance-free providing soft water that is good for use saves your machinery, and high yields in farming

Save Environment

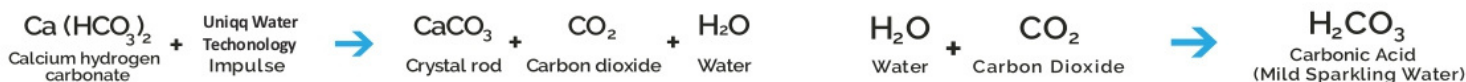

Eco Friendly

Save Power

Save Water

“SCALE HUNTER ” Turbulence of the water passing through a specially designed impulse electrolysis chamber and The creation of a small electrical field around the chamber casing.

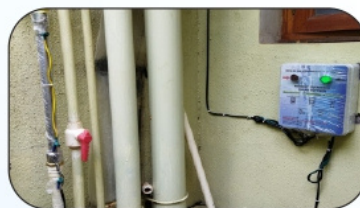

This combination causes a separation of the mineral particles in the water, which changes their behaviour. Particles, which were previously attracted to each other now repel and separate into smaller individual particles. This allows the “separated” mineral particles and salts to flow through the system with minimal interference. Corrosive gases are released during conditioning and move through the water as harmless bubbles. They are expelled into the atmosphere when water leaves the tap. To put it simply, the **SCALE HUNTER** Conditioner eliminates the cohesion that exists between the mineral particles in the water

APPLICATIONS:

➤ DOMESTIC ADVANTAGE

- Improves the quality of domestic water supplies
- The water feels softer as water turbidity is reduced
- Shiny taps, faucets, and bath fittings
- Shiny spot-free sanitary • Clean bathtubs with less scrubbing
- All together happy bathing experience with better soap lather
- Brighter and glowing skin • No more salt stains on dishes
- Sparkling dishes with less cleaning powder
- No more dull and yellow finish on clothes
- Shiny laundry with less detergent
- No more scale forming in the washing machine or dishwasher
- No more scaling in geysers-more life and save in electricity
- More efficient solar water heaters
- No spot and no scales in car and bike cleaning
- No more scaly air conditioner water outlet pipes

Zero Chemicals

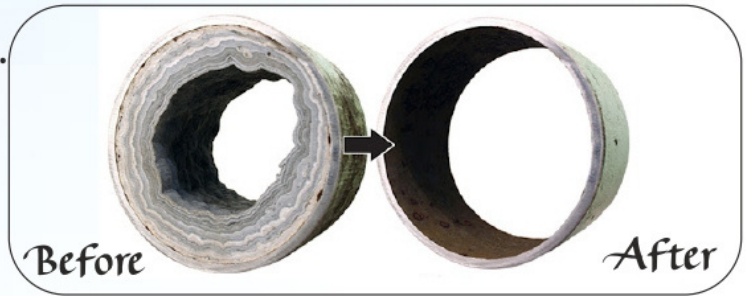

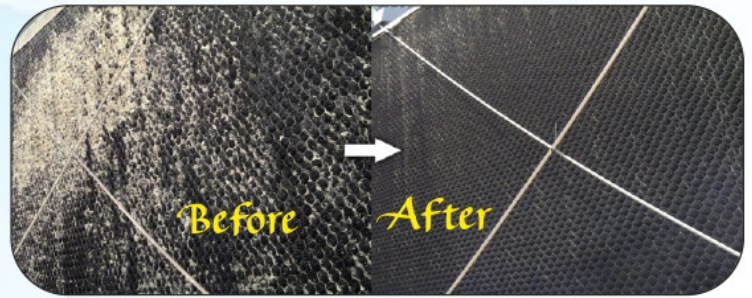

Zero Polutions

Zero Maintenance

Zero Wastage

Industry Advantages

- No more hard water problem
- Maintain the temperature, flow increases.
- Better saving on fuels (up to 30% saving in fuel consumption)
- No more frequent de-scaling and cleaning of equipment
- Reduced maintenance costs
- Increased life of machinery
- Increases potential of machinery
- Compounds like traditional water softeners
- Better efficiency of water in the process as well as in reaction where ever applicable
- Improves performance and life of RO membrane were ever used.
- Reduces cost of production of RO water, process water or demineralized water
- Better life of valves and other fitments
- In simple words better, efficient, and cost-effective production where ever water is involved.

Advantages - Agriculture

less chemicals and fertilizers, Prevents scales in Nozzles.

Treated water is safe for plants,

Treated water prevents calcium clogging plant roots ensuring plants remain capable

of maintaining efficient absorption of water and nutrients,

Reduction in scaling causing improved natural bacterial resistance.

improved Photosynthesis and nutrient intake, Reduction in scale allowing for better water flow throu the entire irrigation system.

Improved (PH.) stability in the water.

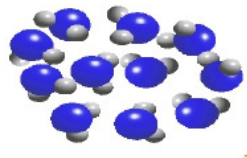

Advantages - Antioxidant Alkaline & Ionizer Water

1. Weight Loss
2. Hydration
3. Liver Health
4. Digestive Health
5. Detoxification
6. Brain Health
7. Bone Health
8. pH Balance
9. Cholesterol Balance
10. Energy Levels
