ABOUT US

Parshiv Tool Technologies is based in Bahadurgarh (Haryana) and incepted in 2007. Our company has been climbing the ladder of success under the leadership and guidance of Mr. Ayush Kapur (Owner) who holds an MBA degree in finance and has experience of over 27 years. At present, we have all the requisite amenities required to produce approximately 15000 or more tools in a month. From the basic blank preparation to fully automatic flute grinding machines, 5 axis CNC machines to latest inspection machines are all available with us to produce top-notch quality products. Additionally, we provide re-grinding services to almost all our customers for a consistent tool performance. We have gathered information by visiting some well-known European carbide manufacturers and machine builders. Selection of right carbide, right profile, right tool and right coatings defines our identity.

Our History We belong to a family which has pioneered in HSS cutting tools since over five decades. We remained one of the few tool makers who exported tools to the most advanced countries at the time when tool makers in India were rare to Find.

Our Vision We intend to provide consistent quality to our business partners. Our prompt response to customer's demand so that we reduce the down time of the machines. Our personalized engagement with the customer to find the better possible solutions.

Our Mission To provide cost effective tooling solutions to our customer at every stage. We provide complete in house re-grinding services in the minimum time and reduce tool stocking of our Customers. We intend to deliver faster services with committed delivery date, that may benefit our customers in the near Future. Please Explore our Catalogue to Know More.

Our Present We established a complete new set up in the year 2007 for the manufacture of Solid Carbide Cutting Tools. At present we have an installed capacity to produce approximately 15000 tools or more in a month. From the basic blank preparation to fully automatic flute grinding machines, 5 axis CNC machines to latest inspection machines are all available with us to produce the tools that speak of their quality. We provide re-grinding services to almost all our customers for a consistent tool performance.
