LAC- SW

NATURE :

LAC SW is a finishing agent with special additives to produce clear water resistant finish which imparts high gloss.

ANALYTICAL DATA :

Solid Content : 25 % \pm 2 Approx.

Appearance : Transparent viscous free flowing Liquid.

Film Character : Clear, glossy.

DESCRIPTION :

LAC SW has an built in capacity to emulsify in water as well as organic solvents by simple normal stirring having medium viscosity. LAC SW has versatility in application, excellent storage stability, easily emulsifiable in water.

The emulsion of LAC SW has good stability & flow properties. Leather finished with LAC SW gives a soft glossy and tack- free film with good Lustre, a natural handle, fullness & good fastness to wet/ dry rubbing properties which can be plated. LAC SW yields finish having high gloss & fastness to water.

APPLICATION :

LAC SW is applied as a top coat on upper Leather, Nappa Leathers or any Leather.

For high gloss : One part of LAC SW can be diluted with one part water or one part LAC SW diluted with 2 parts thinner.

For medium gloss : LAC SW can be diluted in the ratio 1:2 with water or 1:3 with thinner sprayed with high pressure.

STORAGE:

One year from the date of manufacture.
