LE- 441

LE- 441 is an water dilutable finishing agent with special additives to produce clear water resistant finish, to impart gloss.

ANALYTICAL DATA :

Solid Content : 17% Approx.

Appearance : Milky viscous free flowing Liquid.

Film Character : Clear, glossy.

DESCRIPTION :

LE- 441 is a highly concentrated milky, having medium viscosity emulsion. LE 441 has versatility in application, easily emulsifiable both with water and water miscible organic solvents use of organic solvents produces an increase in the lustre.

The finish film is colourless, clear transparent and dries fast producing a lustrous, smooth and pore - filling topcoat LE 441 is miscible with aqueous dye solutions and other additives. Leathers finished with LE 441 can be embossed and drummed it has a medium- soft film.

USE: IT IS USED FOR LEATHER FINISHING

LE441 is applied as a top or intermediate coat on upper Leather, Nappa Leathers or any Leather.

For high gloss : LE441 can be diluted with water 1:1

For medium gloss : LE441 can be diluted in the ratio 1:1.5 with water
