ALS INDUSTRIES DYEING MACHINES

Introduction of the Company

ALS Industries professionally managed industry involved in manufacturing dyeing equipments for the past 70 years. Their high quality range Dyeing Equipments commands a predominant role in textile processing industry. Currently their yarn dyeing machine widely enjoys and occupies major share in the market and its used all over Indian dyeing factories, we also export to other countries like Sri Lanka, Bangladesh, Myanmar and Bhutan.

In future, they aim to produce additional range of textile processing machineries with its complete set of high precision processing machines.

Products

■ Hank Yarn Dyeing Machines ■ Cone Dyeing Machines ■ Arm Dyeing Machines ■ Hydro Extractor ■ Hank Yarn Dryer (continues)

The System

Loading → Dyeing → Hydro Extractor → Drying

Turbo Type – Pressure Dyeing Machine For Hanks

The machine is suitable for any kind of hank yarn dyeing like cotton, mercerized cotton, linen, wool, artificial wool, acrylic, jute and melting mixed yarn, polyester, T/C, acrylic / cotton blends, polyester / wool blends and any kind of blended yarn in hanks form. It can handle several process, such as swelling, refilling, bleaching dyeing & pliability etc., It is equipped with precise & reversing controller to ensure that inside of hank yarn can be uniformly dyed by automatically changing the circulation direction in dyeing with pressure. Full automation / Carrier with Trolley models can be available upon request.

We provides stock tank to prepare for dyeing and re-use the dye stuff for same color. It is especially suitable for Vat dyeing. This stock tank is used as reversible operation by transferring the liquor from dyeing cabinet to the stock tank to add salt and chemicals and from stock tank to dyeing cabinet for hot water bulking of yarns.

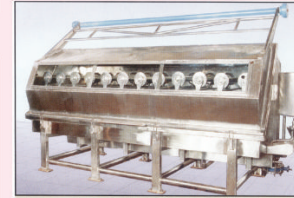

Vertical Type HTHP Dyeing Machine For Cone

The machine is suitable for dyeing & processing cotton, polyester, acrylic, nylon, T/C, acrylic / cotton blends, polyester / wool blends and any kind of blended yarn. Since it is equipped with various types of material carrier, it is suitable for processing of yarn in different forms and packages like hanks, loose fiber, tops, tows & zipper tapes. These machines are available in various sizes & capacity, ranging from 1 kg to 1000 kg with different levels of automation. ALS machines are also available to work with Air pad systems.

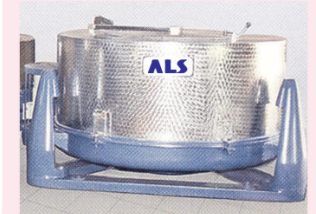

Arm Dyeing Machine For Hank Yarn

This machine has been specially designed for dyeing delicate yarns such as natural silk, wool, viscose, rayon acetate, mercerized cotton etc., Entanglement free operation, adjustable liquor flow, Indirect heating Completely made of stainless steel. These machines models are 2-4-6-10 arms. Two machines with similar arm capacity can also be coupled together through a coupling device.

Hydro Extractor

These machine suitable for hank yarn, fiber, packages, woven and knit fabrics etc., fully automatic operation without clutch and brake ensures trouble free performance and high extraction with low power consumption. Available in basket size from 750 mm to 1950 mm, capacity 30 – 700 Kgs. per charge. All machines available in standard execution or with fully open-able cover or double lid.

Continuous Hank Yarn Dryer

The machine is suitable for hank yarn drying like cotton, linen, wool, artificial wool, acrylic, jute and coir etc., These Continuous dryer suitable for 54,72 and 90" hank length size materials. The yarn is carried on stainless steel / Aluminum carriers rods and the heating media is steam or hot oil circulation. The dryer is highly energy efficient variable air flow and machine speed.
