Effectively used in Nurseries, Green/poly Houses, Horticulture, Orchards, Grape Garden, Vegetables, Sugarcane Banana etc.

Today's Farmer has one concern using as little water as possible to achieve maximum crop yield. BO, Well computerised water conditioning dimension in the water treatment technology.

BEFORE

AFTER

ELECTRONIC WATER CONDITIONER

At the Rohini ben farm water supply is quite salty. A BO,Well water conditioner was installed on one of the pipeline controlled comparative tests were carried out using conditioned and unconditioned water on plants that were considered un-saleable because of salt encrustation and leaf burn. As you can see there is spectacular clean growth from the conditioned water.

More and more golf courses around the world are using treated effluent to irrigate their greens and fairways.

Although this is economical way of irrigating. It does have problems associated with it. This is what the course superintendent had to say. "Before installing the BO,Well" conditioner every sprinkler head on our 18 hole course had to be hand cleaned every two weeks to remove fungal growth since installation all sprinkler head have required "No Cleaning At All"

ELECTRONIC WATER CONDITIONER

Electronic water conditioner eliminates the hardness effects without every touching the water, nor adding any chemicals. Functionally softned, but chemically unchanged water that is absolutely safe to use.

Stop scale & corrosion

Bacterial count is reduced

**The consumption of Electricity/fuel for heating
(Boiling) surgical
equipments in water is reduced.**

Inhibit algae, fungus and mildew growth

**The working life span of all heat appliances
increases.**

Soap and detergent become more effective.

**No more rings in commodes, ugly
scum on glazed tiles, helps
keep wall tiles clean.**
