

A microscopic view of various mineral grains, including calcite, dolomite, quartz, and talc, showing their characteristic crystal structures and colors. The grains are scattered across the frame, with some appearing as sharp, angular crystals and others as more rounded or fibrous structures. The colors range from light gray and white to dark brown and black.

SARVODAY
MICRONS PVT. LTD

2012

SARVODAY MICRONS PVT. LTD.

is a trustworthy name when it comes to chemical compounds. The list of products that we provide includes calcite powder, calcium carbonate powder, dolomite powder, marble powder and quartz grains. In addition to this, we also provide quartz powder, soap stone powder and talc powder.

SARVODAY MICRONS PVT. LTD. is a trustworthy name when it comes to chemical compounds. We are engaged in manufacturing, supplying and exporting superior quality chemical compounds. The list of products that we provide includes calcite powder, calcium carbonate powder, dolomite powder, marble powder and quartz grains. In addition to this, we also provide quartz powder, soap stone powder and talc powder. The chemical compounds that we make available are processed using industrial grade base materials, which offer unmatched physical and chemical properties to them. Available in different variants and grades our chemical compounds have been able to cater every needs and demand of our esteemed clients. The entire range of chemical compounds that we offer is unmatched in terms of quality and gives better performance as compared to other chemicals available in the market. Connect with us today and purchase our products at reasonable prices.

Located in Udaipur (Rajasthan, India), Sarvoday Microns Pvt. Ltd. was incorporated in the year 2012. The entire workforce of Sarvoday Microns Pvt. Ltd. is engaged in serving clients with sheer dedication that has allowed us to establish a vast clientele.

MAJOR MARKETS

Since inception, we have served many leading chemical laboratories, medical industries and others in Udaipur. The quality of our products is widely acknowledged by the clients not just in India but in the international market as well.

WHY CHOOSE US?

Owing to our industry know-how, we have managed to cater to the diverse requirements of the customers through our chemical compounds. Moreover, we are providing these chemical compounds at market-leading prices.

OUR PRODUCTS

CALCITE POWDER

Calcium Carbonate & Calcite Powder (CaCO₃)

has a pivotal role in the modern industrial economy due to its versatility, availability, and traceability. Sarvoday Microns offers calcite Powder (Calcium Carbonate) derived from cal veins in South West Rajasthan.

The Sarvoday Microns range offers chemical purity, outstanding brightness and controlled particle size distribution. Available in a wide range of micron sizes. The particle structure is spherical and microcrystalline. We provide extremely suitable particle-size distribution to ensure better dispersion and excellent physical properties (e.g. increased impact strength and High Opacity) in various polymers/plastics application.

Also, our Micronized Calcite Powder is used as a Functional filler/additive in RPVCA pipes, Master batches, PP, HDPE, LDPE, ABS, Epoxy, PS and other polymer based compounds & as an extender in paints. We have firmly positioned ourselves as one of the major Cal Rock Exporters and Suppliers based in India. Cal is found in veins traversing various rock types, particularly limestone of the Aravalli and Ajabgarh series in Rajasthan, India. Calcium carbonate veins 30 to 150 cm. Thick, running uniformly sometimes for long distances, are usually found. Calcium also occurs as calcareous tufa, travertine, stalactite and stalagmite.

OUR PRODUCTS

CALCIUM CARBONATE POWDER

Calcium Carbonate & Calcite Powder (CaCO_3) has a pivotal role in the modern industrial economy due to its versatility, availability, and traceability. Sarvoday Microns offers calcite Powder (Calcium Carbonate) derived from cal veins in South West Rajasthan. The Sarvoday Microns range offers chemical purity, outstanding brightness and controlled particle size distribution. Available in a wide range of micron sizes. The particle structure is spherical and microcrystalline. We provide extremely suitable particle-size distribution to ensure better dispersion and excellent physical properties (e.g. increased impact strength and High Opacity) in various polymers/plastics application.

DOLOMITE POWDER

Dolomite is an earthy mineral. It is a Carbonate mineral, also known as Calcium Magnesium Carbonate. Generally it is white to off white in color. Its chemical formulae is $\text{CaMg}(\text{CO}_3)_2$. This mineral crystallizes in the Trigonal system. South of Rajasthan in INDIA is rich in Dolomite deposits. Dolomite is a mineral that has a special saddle-shaped crystal. In agriculture, dolomite is used as a soil conditioner and as a feed additive for livestock. Our Company is manufacturer & suppliers of dolomite Powder in India. We maintain high quality standards throughout the process of dolomite powder. We are leading company in the field of minerals suppliers. We are manufacturer, supplier and exporter of Dolomite powder in India. We offer Dolomite powder in best quality range.

OUR PRODUCTS

MARBLE POWDER

Dolomite is an earthy mineral. It is a Carbonate mineral, also known as Calcium Magnesium Carbonate. Generally it is white to off white in color. Its chemical formulae is $\text{CaMg}(\text{CO}_3)_2$. South of Rajasthan in INDIA is rich in Dolomite deposits. Dolomite is a mineral that has a special saddle-shaped crystal. Dolomite is a common rock-forming mineral. Dolomite originates in the same sedimentary environments as limestone - warm, sand place, shallow, saltwater environments. In agriculture, dolomite is used as a soil conditioner and as a feed additive for livestock. We are manufacturer, supplier and exporter of Dolomite powder in India. We offer Dolomite powder in best quality range.

QUARTZ GRAINS

Quartz is the second most abundant mineral on Earth's crust. A wide variety of high grade Quartz that we are offering is appreciated for its resistance against mechanical and chemical weathering. Quartz (Silica SiO_2) is the most common mineral in the Earths crust. Quartz is found in sandstones, pegmatites granites, and other igneous rocks. It is hard, chemically inert and has a high melting point, attributable to the strength of the bonds between the atoms and extremely resistant to weathering. The offered Quartz is finely processed at our sophisticated production unit. We are a well-established Quartz Manufacturer, Exporter and Supplier from Rajasthan (India). We provide them in safe, industrial grade packing. Also, we can process bulk orders on request.

OUR PRODUCTS

QUARTZ POWDER

Quartz is the second most abundant mineral on Earth's crust. A wide variety of high grade Quartz that we are offering is appreciated for its resistance against mechanical and chemical weathering. Quartz (Silica SiO₂) is the most common mineral in the Earth's crust. Quartz is found in sandstones, pegmatites granites, and other igneous rocks. SOAP STONE POWDER

Sarvoday Microns manufactures & supplies high-quality Soapstone, a metamorphic stone composed of mineral talc rich in magnesium. Soapstone, popularly known as soap rock, has been used as carving medium since thousands of years. Soapstone fits amazingly well, as material used in housing & furnishing, from rustic old farmhouses to contemporary classic urban homes. Soapstone give an extensive choice to consumers in form of floor tiles, attractive kitchen tops, sculptures, sinks and inlaid carvings. Sarvoday Micron's wide range of Soapstone is just the perfect addition to your dream house to give it that warm, soft and minimal look. That chic nest pad for you and your family might be just a click away!!

OUR PRODUCTS

TALC POWDER

We are the one of the prominent manufacturers and suppliers of Talc Powder, which is used in various application in paint, glass, plastic and ceramic industries. This talc powder is appreciated for superior quality, durability and reliability features. We provide them as per the need of clients at affordable prices. They are well known for good impact strength, excellent flow rate and low mold shrinkage. Clients can avail them from us at reasonable rates.

USES: Talc powder is used in innumerable industries mainly in paints, paper, Plastics, rubber, soap and Detergents, Cosmetics, Ceramic, textiles, pharmaceuticals etc.
