OxyO was founded on the philosophy of Universal Design, which means the design of process usable by as many people as possible. Today, OxyO offers many ideas for residential, education institutions, commercial establishments and a few industries, all created based on this principle.

The advent of 21st century, several techniques to retain biomass in the reactors evolved. We have extensive work done on working plants to demonstrate and introduce to the market a new gen performing plants. The thrust on process know how thinking beyond conventional technologies raises the bar of customer expectation and performance. OxyO is the unit of **Aadhithya Enterprises**

It all began with some friends selling various products relating to water and waste water treatment of reputed brands. Little did they realize that together with knowledge acquired out of their experience they could churn out a simple system integration company to sell DIY kits.

## WHY US

- **Multidisciplinary Talent :** OxyO is built to invite multidisciplinary talent for transformation to state of the art waste water technologies.
- **Deeper Relationship :** We enable a deeper relationship to our environment and our clients.
- **Biological Treatment :** In a way, the narration of all our products supplied to the end user is scripted to tell the contractors how to fit. That's it.
- **Performance :** You will be enthralled by its performance. Our plants perform better without human assistance.

## Wastewater Treatment

With the increase in pollution, water bodies are also getting polluted day by day. There is very less amount of water left on the planet which is clean and drinkable. This is the reason why people are in search of modern ways to treat water and remove the contaminants from it and to make it fit for use. Aadhithya Enterprises understands how important is to have healthy water which is why we came up with an innovative technology. We treat wastewater with advanced equipment and make it fit for reuse.

## Wastewater Treatment Plant Designing

India's only proven Single Tank Design. Kindly contact us for more information.

## Water Treatment Plant Installation Service

Aadhithya Enterprises provides water treatment plant installation services and makes sure that the wastewater is treated well and it is usable. The treatment plants are basically installed for water or beverage treatment plant. The treatment process is divided into three different stages in order to ensure that the water is treated well. Our treatment plant installing service is great. It reduces most of the waste in the water and makes it exceptionally clean for use. The treated water can be used for producing high-quality food or beverage. Get our experts at your work and contact us to get our services.

## Water Treatment Plant Maintenance Service

Several aspects are needed to run a wastewater treatment plant. Some of them are electrical facility, power generation facility, speed control machinery, rotating equipment and many more. These can sometimes breakdown and stop working which is why these need to be taken care of. We at Aadhithya Enterprises provide maintenance for wastewater treatment plants, monitor and look at the control process to make sure that the process takes place without any disruption.

## Water Treatment Service

Water treatment services are much needed these days because of the rising amount of pollution. The water bodies are also being polluted with harmful chemicals and contaminate. These are very harmful to the human body and one cannot consume it. The level of fresh drinking water is going down bit by bit and the water will be insufficient for the people worldwide. This is the reason why we at Aadhithya Enterprises help you set Water treatment plants which treat water and makes it free from any kind of harmful contaminates. Therefore, without any delay make sure to contact us and get fresh drinking water.
