ABOUT US

Venus Aqua is an industry-leading provider of water treatment services and solutions in India with its long-lasting history and experience. We help our customers with a range of water re-use and recovery solutions with the water treatment technologies we have developed throughout our history. We always strive to make the best of our systems and provide our customers with the best possible machinery to treat the water and re-use it for different purposes. Thanks to our comprehensive and innovative range of technologies and services across our technological treatment services, make sure that your water treatment system is always correctly installed and delivered on-time to give you what you want.

Venus Aqua has been providing services to different communities, regions, and cities for 13 years. Because of the work we do and the services we provide, health and safety take the priority in our list, and whatever service we provide, we always make sure that not only the system we are building and installing gives you the best health and safety benefits, we also make sure that our employees work in a safe and healthy environment where they feel secure and encounter no problems. Thanks to this approach we have been doing for years, our track record for health and safety standards has been doing perfectly fine and had no problem whatsoever. This means that it is not only your word but also our record that has been proven by the necessary bodies.

It is not only the water we re-use. We believe that whatever we use or do, everything needs and can be recycled and converted into energy or something that can be useful. The business we do is primarily used on re-using things that we believe can be recycled and we always show that to other things, as well. We are trying to make our customers think the same way. Technologies we use can treat all types of water into drinkable or clean water which is something that proves anything can be treated and used again. This look at the world enables us to solve many problems we face while finding technologies to use or manufacturing new treatment systems that will allow us to do more. Our customer's experience tells you more than we can ever say. That's why we always believe in the power of customer's words rather than our word and we always strive to have given all of our customers the best service they will ever receive.
